

## AIRCRAFT CLEANING AND DISINFECTING SERVICES AVAILABLE

Protect your aircraft with a multi-layered approach. Select from the following services:

**Air Ionization Treatment** – UV Ozone generator will be placed in the cabin with the door shut and run for a minimum of one hour. The ionized particles kill airborne and surface pathogens and viruses. Afterwards, the cabin will be ventilated with fresh air.

**Interior Disinfectant Wipe Down** – We go through the whole interior, wiping down and disinfecting all areas using our EPA registered disinfectant (Celeste Sani-cide EX3, EPA Reg. #42048-4) which is also an all-purpose cleaner. It is eco-friendly with no adverse effects on any interior surfaces.

**ULV Fog System Disinfectant Treatment** – We fog the interior using the Celeste Sani-cide EX3 disinfectant to completely fumigate the atmosphere inside the aircraft. This is followed up with a wipe down of all surfaces.

**Anti-microbial Barrier Treatment** – All of the high traffic touch points in the aircraft are treated with ClearCabin powered by *PreventX*, that has an effectiveness of 90 days. This provides long-lasting protection. This treatment arrests the growth of microorganisms and harmful bacteria. Once they come in contact with a treated surface, the cell walls are physically ruptured, thereby killing the microbes. This treatment is effective against many enveloped and non-enveloped viruses.

Ask to speak with our Detailing department for more information.

The Meridian Jet Center is an FAA Part 145 certified repair station. It is also certified by European Aviation Safety Agency (EASA). Honeywell has deemed Meridian an authorized TFE731 and -36 Series APU Service Center. We are certified to work on Challenger, Citation, Falcon, Global, Gulfstream, Hawker and Learjet aircraft. Available services include airframe inspection and repair, engine maintenance (minor and major), avionics repair and installation, Service Bulletin compliance, and troubleshooting.
